EDITORIAL POLICY

The Roughneck was founded in 1952 as the voice of the Canadian oil community. The magazine reports on the people and events of that community - both past and present - that have made the oilpatch in Canada what it is today.

The Roughneck analyzes political events that affect the industry and profiles people and businesses that are a part of it. The magazine covers the news that others miss because it is a part of the industry about which it writes. Opinions expressed herein are those of the staff writers and may not reflect those of the magazine's readers or advertisers.

The Lloydminster Heavy Oil Show was launched in 1984 at a time when optimism was again peaking above the clouds of the hated National Energy Program. Prime Minister Trudeau was out and Mulroney swept into Parliament that fall with the largest landslide majority government in Canadian history.

Canada Drops in Global Energy Investment Rankings as Feds Throw More Disincentives at Oilpatch

“How the mighty have fallen.” II Samuel 1:19.

In 1996, then Prime Minister Stephen Harper stood up in parliament and declared that Canada could become an “energy superpower.” What a contrast to today’s federal Liberals. They have made it abundantly clear they don’t really care for the Canadian oilpatch, won’t lose sleep if investment capital relocates elsewhere, and then have the nerve to dismiss all criticisms about its meddling as “offensive.”

To no one’s surprise, today British Columbia is the least attractive Canadian province for oil and gas investment coming in at 76th out of 97 jurisdictions, due to its unstable NDP/Green coalition. Alberta didn’t do much better, coming in at 33rd. Nova Scotia ranked 26th, Manitoba was 12th, Saskatchewan at seventh. Newfoundland and Labrador pegged fourth worldwide, its best result in the past five years, reports the Fraser Institute’s 2017 Global Petroleum Survey.

That’s the good news. The bad news is that unless Canada builds more pipelines to export crude oil internationally, changes its punitive fiscal terms and

taxation load, and lightens the cost of regulatory compliance, these provincial rankings are in danger of slipping even more in the next surveys. From 2013-2017, Alberta’s best ranking was 14th in 2014, British Columbia’s was 39th in 2016, while Manitoba scored sixth in 2014, and Saskatchewan was rated fourth in 2016.

Inventory of Hindrances Multiplies

What’s even worse news is the list of disincentives to attract oil and gas investment into this country keeps growing longer.

The worst example is Bill C-69, which was passed into law June 20, 2018 by the federal government. It removed the National Energy Board, headquartered in Calgary, and replaced it with the Canadian Energy Regulator, located in Ottawa. It was designed to “streamline the regulatory process and increase the scientific rigour,” said Catherine McKenna, minister of environment and climate change. Bill C-69 changes the environmental assessment to a process involving three separate Acts of Parliament – the Impact Assessment Act, the Canadian Energy Regulator Act, and the Navigation Protection Act.”

The Canadian Energy Pipeline Association cried foul. “In its current form, Bill C-69 cannot achieve greater certainty, clarity, and predictability required for investment in new linear infrastructure projects that can extend hundreds, if not thousands of kilometres across provinces, communities, and Indigenous communities. It is difficult to imagine that a new major pipeline could be built in Canada

By Heather Douglas, President & CEO, Strategic Public Affairs Ltd. & CEO Platinum Roundtable

Heather's wealth of experience and unique perspective provides our readers with thought provoking and timely issues of value to the Canadian, and world oil and gas industry. Ms. Douglas drafts business and communication plans, while helping executives from a variety of industries grow into great leaders. She spent more than 30 years working in the oilpatch holding a number of senior roles.

Fittingly, she has won numerous awards for her strategies, programs, business acumen and public policy recommendations.

under the Impact Assessment Act. We are concerned that the government has effectively frustrated regulatory reform to advance their climate change agenda, and has baked broad policy subject matters into an otherwise very technical decision-making process. CEPA does not see anything within the Acts that will attract energy investment to Canada.”

Add to that list more impediments – carbon taxes, carbon-emission caps, clean fuel standards, methane regulations, tanker bans, and the nationalization of the Trans Mountain pipeline expansion to the tune of \$4.5 billion.

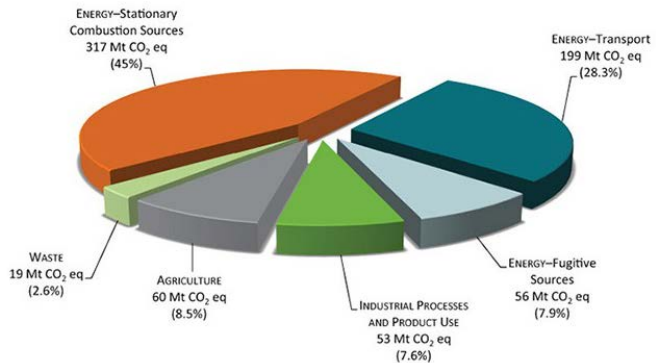

In late June, Canadians learned the true tax burden of Trudeau’s carbon taxes. The hardest hit wallets will belong to citizens in Alberta (\$1,111/person), Saskatchewan (\$1,032/individual), and Nova Scotia (\$1,120/person) to comply with the \$50/tonne tax Ottawa has mandated for 2022. The rest of the provinces will pay less, compared to the households in those provinces: New Brunswick (\$963), Newfoundland and Labrador (\$859), Prince Edward Island (\$788), Ontario (\$707), Manitoba (\$683), Quebec (\$662), and British Columbia (\$603).

Those taxes will increase sharply, all in the name of lowering emissions. When the carbon tax is pegged at \$100/tonne, Albertans will fork over \$2,223, Saskatchewan pay \$2,065, and Nova Scotia \$2,240. Everyone else’s bill will be more than \$1,000/year.

Already across Canada, particularly in

the Maritimes, a significant number of households fit the definition of “energy poverty” — that is, 10 per cent or more of household expenditures are spent simply procuring the energy needed to live (to power the home and transportation). In 2016, the Fraser Institute measured energy poverty in Canada and found that when you add up the costs to power the home and cars, 19.4 per cent of Canadian households devoted at least 10 per cent or more of their expenditures to energy.

When the federal government announced its plan to cut its greenhouse gas emissions by 30 per cent below 2005 levels by 2030, it gave little indication how it planned to do it, exactly. Canada produced 749 megatonnes of greenhouse gas emissions in 2005, according to Environment Canada data. By cutting 30 per cent, the government hopes to eliminate more than 200 million tonnes/year. Of that, cars, trucks, and motorcycles were responsible for 88 million tonnes. Busses, trains, and domestic flights add another 10 million tonnes. Alberta’s oilsands emit 62 million tonnes.

(Courtesy of Government of Canada, Greenhouse Gas Sources & Sinks: Executive Summary 2018).

That makes 179 million tonnes.

Don't forget the feds' clean fuel standards. Canada's Clean Fuels Standards Act was tucked into the Canadian Environmental Protection Act and mandates a 30 per cent emission reduction of greenhouse gases below 2005 levels by 2030. That's a reduction of 30 million tonnes annually.

Next came the methane regulations. The feds announced those regulations in April and imposed more costly requirements on the oil and gas sector. Minister McKenna said the final rules would require oil companies to inspect virtually all their field equipment for methane leaks three times/year, repair all leaks, and dramatically reduce their ability to vent the gas into the atmosphere.

Then the government passed its infamous tanker bans, Bill C-48 called the Oil Tanker Moratorium Act. As Don Braid reported in the *Calgary Herald* (June 14, 2018), "it's not a tanker ban at all. It's a product blockade. And most of the blocked products are from Alberta ... From the northern tip of Vancouver Island to Alaska, the bill prohibits loading shipments of everything from diluted bitumen to oil and gas condensates." Then Ottawa added more products to the ban, citing spill concerns.

The last disincentive enacted was the nationalization of the Trans Mountain pipeline expansion. With that purchase, we are assured, some of Alberta's oil will get to Asia, where it should command high prices. The sale is expected to be complete in August and Canada will become owner of the cross-provincial pipeline and all Kinder Morgan Canada's core pipeline assets, through a crown corporation. The government hopes to sell the pipeline after that. According to Finance Minister Bill Morneau, interested parties include Indigenous groups, pension funds, and "multiple" others have expressed interest in the project.

Truly the mighty have fallen - all the way from energy superpower to having a crown corporation build Canada's only export pipeline. ☺

Leave a Clear Message

Years ago, a late-night conversation with a good buddy of mine centred on how we wanted to be remembered after we passed. Wine may have been involved. The exercise involved trying to imagine who we wanted to attend our funeral and what they would be saying about us. The idea being, if you lived your life in such a fashion that the people who were important to you were all there, and saying nice things about you, it was a life well lived.

Recently I've acted as executor for a couple of estates. It's become apparent to me that a key part of the above exercise, is documenting in your will what you want to happen with your assets insofar as your heirs, family, and friends are concerned. Clarity is central to an effective will. Over the years, some clients of mine have skipped using a lawyer to assist them in writing their wills and have done their own estate and tax planning. At a minimum, I would suggest they engage an estate lawyer to review their finished

documents to see if there were any loose ends that could be tightened up. Inevitably, upon review by a professional, issues were raised that the clients had not thought about and amendments were made. For example, tax efficient provisions for a disabled child, using insurance for estate protection, protecting a child's inheritance from divorce, or not correctly identifying beneficiaries or assets.

The reason for this is that many will kits do not provide for detailed planning. Some do not have the space to add a contingent beneficiary in the event of a beneficiary predeceasing the testator. Others don't allow for a contingent Executor in the event of the death or incapacity of the initial executor. Many will kits are overly simplistic and don't allow for common types of situations that can occur.

If an estate needs to go through probate, the clarity of the will is essential in this happening in a timely manner. When a will is probated, the court is ensuring the will is valid and is authorizing the executor to proceed as the will directs. If an executor is uncertain of what the testator may have meant in a specific part of the will, they will apply to the court for an interpretation. The executor is responsible for the assets in the estate. If they didn't apply for the interpretation and proceeded to distribute the assets of the estate incorrectly, they can be held liable by beneficiaries who may challenge the will. By applying to the court for an interpretation the executor is protected from potential legal action as any subsequent distribution of the

assets to beneficiaries has been reviewed and authorized by the court. While the executor is protected, the beneficiaries may not be happy with this exercise as requesting an interpretation can significantly slow down the probate process. In addition, the deceased's wishes may not even be met. Although the court presents their interpretation of the will, that doesn't mean it's correctly determined what the deceased wanted. Seeking the assistance of a professional in writing a clear, concise will may eliminate unnecessary costs and delays in probating a will.

A report by Angus Reid Institute indicates that more than half of Canadians (51 per cent) say they have no last will and testament in place and only 35 per cent have one that is up to date. So essentially only 15 per cent of Canadians have an up to date will. This means that almost every-

one reading this column needs to act if they want their assets to be distributed to the right people and in the right fashion.

If you die without a will, the province will dictate who gets your assets. This could cause unnecessary problems in a lot of very common situations. For example, assume we have two parents living in Alberta with two children under that age of 18. If one of the parents dies, half of the estate will go to the surviving parent while the other half will be held in trust for the children by the Public Trustee of Alberta. If the surviving parent needs to access funds for the under-age children they will need to apply to the Public Trustee every time they need funds. I'm pretty certain my wife would not be saying nice things about me on that fateful day if I didn't have a good will in place and left her in that situation. ⊕

The New, Inclusive, Fuzzy OPEC

By Darcy Spady

“OPEC is not greedy, OPEC is wise.”

This quote jarred me out of my daze at the Hofburg Palace in Vienna. I think at that moment I was staring at the opulent ceiling or carved balcony from which most of Europe was ruled a couple of hundred years ago – enjoying the building, not so much the speaking. Who just said that phrase? The shocker of that quote was not the content, but the person who delivered the quote. Scott Sheffield, CEO

of Pioneer Resources of Texas was speaking, and what he just said was in direct contrast to what the president of his country had been tweeting weeks or days before. I thought for at least a full minute before live tweeting the quote myself (@SPE2018Pres). This is amazing!

As a kid growing up in rural Alberta when OPEC came onto the scene, wisdom was not a word used when describing OPEC. As an adult, many

Darcy Spady is with Broadview Energy in Calgary, is the 2018 president of the Society of Petroleum Engineers International (SPE), chairs the boards of Green Imaging (Fredericton) and Crestwynd Exploration (Calgary), and is a board member of MNP Petroleum (Zurich). He has worked with Columbia Natural Resources / Triana Energy group of Charleston, WV; as well as a decade for Schlumberger in their wireline and pressure pumping segments. He served as CEO of Contact Exploration in Canada and was head of sales for Sanjel Corporation. Spady holds a BSc. in Petroleum Engineering from the University of Alberta in Edmonton, and is a professional engineer in Alberta and New Brunswick.

years later, having read the commentary of the U.S. president, berating OPEC for playing games and being greedy, I was not prepared for the head of a major American independent to support OPEC in such a way. In my mind the comment could have come from many of the others in the room, perhaps even a smaller OPEC member such as Ecuador or Gabon. This comment was significant. OPEC – not greedy, but wise.

I was probably the first kid from Three Hills to be invited to say some words to any OPEC gathering. For me a big event was Cruise Night on the first weekend of June every year, not a bunch of people talking in Austria. So, I was honoured when His Excellency, Dr. Barkindo, Secretary General of OPEC invited me to the 7th OPEC

“First, OPEC is alive and well, and there was a lot of celebration going on about the partnership agreement signed with Russia, in Algeria December 2016. This treaty, after a year and a half, is holding strongly and is a keystone of the new OPEC.”

GRANDE PRAIRIE & DISTRICT

**GRANDE PRAIRIE
PETROLEUM ASSOCIATION**

International Seminar in Vienna, and asked if I could say a few words from the viewpoint of the small independent North American producer.

I was representing the little guy, of which there are probably some 11,000 on the continent, with an average production of 400 bbl/day. I do indeed live in that space! Yes, Dr. Barkindo, I can say a few words to the kind folks at OPEC. What I did not realize was that I would have a ringside seat at one of the defining global business meetings of the year, the open dialogue before the closed-door OPEC June meeting and subsequent press announcement of June 21st.

What was really fun for this hayseed from rural Alberta was that I had a "speaker" security pass, and figured out that the Viennese espresso in the speaker ready room is some of the tastiest on earth. I was chilling at the same coffee table as His Excellency Prince Abdulaziz Bin Salman al Saud of Saudi Arabia, so at one point the waiter was requested to have some better snacks at our table. Indeed!!

The new OPEC is truly a new and different organization. During the two days that I was mingling, listening, and even speaking, I was amazed and made several strong observations.

First, OPEC is alive and well, and there was a lot of celebration going on about the partnership agreement signed with Russia, in Algeria December 2016. This treaty, after a year and a half, is holding strongly and is a keystone of the new OPEC. It was referred to many times. Minister Novak from Russia also

attended the seminar, and Russia had a strong speaking position at the podium. I give a lot of the credit for the strength of the organization to Secretary General Burkindo and his people skills. OPEC is a force to be reckoned with and has collaborated with the most important swing producer on earth.

Secondly, despite bitter disagreements within OPEC, most notably Saudi Arabia and Iran, the group understands the need for consensus and acts reasonably as a team. Interestingly, the senior staff at the Secretariat in Vienna are all chosen from member countries, and they work very well together. Every country had a chance to speak, and even though the speeches from the oil ministers of Venezuela and Iran were "interesting," everyone had a turn. There was a lot of security and a lot of scurrying around by athletic guys with earpieces as I was sipping my Viennese coffee.

Thirdly, and most importantly, the term "market stability" was used constantly, even by the sand artist at the social night. It was pointed out -- very strongly -- that market stability is not price stability, and various examples were given. It amazed me that OPEC now feels responsible to be a pillar in the economic world, and market stability was so important. Whether it is a formal partnership agreement with Russia or better monitoring as a group, they are all about market stability...and why shouldn't they be?

I believe that the maturity of bodies, such as OPEC, offer the global

economy a place not defined by geography or politics to unite. If you disagree with that statement consider how many geographic regions OPEC represents, how many religions are prevalent in its members, and how many times member countries have been directly at war. Still, OPEC plods on, not as a political or geographic entity, but as a commodity-based organization. Bizarre? Unique? Fuzzy? Not sure, but it really is working.

To come back to CEO Sheffield's remark, "OPEC is not greedy, OPEC is wise," I would have to say strongly, I AGREE! Thank goodness there are other forces in the world not entirely dictated by one political system or theological leaning. I love the concept of enduring commodity specific representation. Bravo OPEC! ⊕

“The new OPEC is truly a new and different organization. During the two days that I was mingling, listening, and even speaking, I was amazed and made several strong observations.”

Indigenous Engagement in the Energy Sector

By Michael Heron, *President & CEO Transform Environmental Inc.*

Corporate Aboriginal Policies are policies designed to encourage dialogue to introduce and consult with Aboriginal peoples that are impacted by a proposed expansion or new resource-based project. The intent is to gain stakeholder support for these projects, and working with the impacted communities, to prepare for employment and business opportunities, while minimizing or eliminating the impact to the land and water.

In a series of major Supreme Court of Canada decisions, the country's legal foundation shifted dramatically. It started with the recognition of the Aboriginal right to hunt for food (White and Bob), to pursue Aboriginal title (Calder), to fish for food and ceremonial purposes (Sparrow), and to fish for commercial purposes (Marshall).¹

Two Supreme Court decisions - Haida and Taku, both in 2004 - led to the Court's definition of the government's "duty to consult and accommodate" with Indigenous peoples before proceeding with development on their lands. These decisions, only a dozen years old, quickly became part of the basic vocabulary of resource development in Canada.

The court required that governments and, implicitly, companies consult with affected Aboriginal communities before proceeding with development activities. The consultations were expected to produce appropriate accommodation, including compensation for the disruption of wildfire, lifestyles, or the land.²

These have been capped by recent successes, including the transformative Tshilqot'in decision in 2014 and the 2016 Daniels judgment, which addressed the legal status of Metis people. Looming over these legal successes is the prospect of further challenges, particularly the First Nations' threatened case on the Natural Resources Transfer Acts of 1930, and literally hundreds of resource-related matters currently before the courts. Governments and corporations, starting from the shallow base of corporate social responsibility and forced by the courts to shift towards duty to consult and accommodate, adapted to the new legal realities.³

The United Nations Declaration on the Rights of Indigenous Peoples (UNDRIP), passed by the UN General Assembly in 2007 and belatedly endorsed by Canada in 2010, raised the stakes further. UNDRIP included several references to the right of Indigenous peoples to express their "free, prior, and informed consent," including on the approval of resource projects on their traditional territories. When Prime Minister Stephen Harper's government endorsed UNDRIP, it declared (with considerable Aboriginal agreement) that the UN document was "aspirational" and therefore not a challenge to Canadian

Michael Heron, co-founder, president & CEO of Transform Environmental Inc.

law and current practise. In 2015, Liberal Party leader Justin Trudeau indicated his party's support for UNDRIP. Alberta NDP leader Rachel Notley made a similar commitment before the 2015 provincial election. In May 2016, the Government of Canada addressed the Permanent Forum on Indigenous Issues at the United Nations and formally committed itself to implementing UNDRIP. ⁴

Mark Anielski, my friend, economist and author noted in his book, *An Economy of Well-Being*, that "the community asset assessment and well-being planning process for First Nations begins by engaging the entire community in a dialogue about their values, needs, hopes, aspirations, Indigenous laws, and traditions. The result is shared community values and a mutual understanding of the needs, gifts, skills, competencies, and dreams of all members and clans of the

Nations for a better life." ⁵

Through an innovative assessment that respects the Traditional Medicine Wheel the individual employment barriers can be addressed and through an integrated service delivery model the local accredited agencies can begin to address those employment barriers to ensure the individual participants are "ready, will and enable" to continue with their employment training or secure meaningful work. Organizations, such as MNP, can assist the Indigenous communities by offering business workshops that results in a business and financial plan, introduction to strategic partners and financing. ⊕

GPS CELEBRATED 50TH ANNIVERSARY

By: Heather Douglas

Half a century is a long time.

In 1968, Lester B. Pearson was prime minister and then turned the reins over to Pierre Elliott Trudeau. Ernest Manning was premier of Alberta and retired, paving the way for Harry Strom. The Ottawa Rough Riders won their sixth Grey Cup, defeating the Calgary Stampeders 24-21. The Montreal Canadiens won their 15th Stanley Cup by beating the St. Louis Blues, giving Jean Beliveau his second Conn Smythe Trophy. Domestic crude averaged \$14.57/bbl (US) and imported oil sold for \$13.16/bbl.

Today, Pierre's son Justin Trudeau is prime minister, Alberta elected its first NDP Premier, Rachel Notley, and the Washington Capitals beat the Las Vegas Golden Knights to win the Stanley Cup. The Stampeders are odds-on-favorites to represent the west in the Grey Cup. West Texas Intermediate is selling for \$73.94 (US) and Western Canadian Select (WCS) is trading at a discount of \$18/bbl (US).

From June 12-14, 2018, approximately 50,000 industry professionals, government officials, national and international energy companies, thought leaders, and influencers from around the globe gathered at Stampede Park in Calgary to display their innovative technologies, engage in complex and controversial discussions, and meet likeminded energy professionals. Event organizers were pleased with the turnout, quality of the exhibitions, and interest of the attendees.

“For the last five decades, Global Petroleum Show has experienced significant transformation alongside the evolving industry,” says Nick Samain, vice president of dmg events, organizers of the show. “In the face of adversity, the event adapted to provide a bigger event. It’s still the largest exhibition and conference covering the entire oil and gas supply chain.”

The conference wrestled with climate change issues – how to reduce hydrocarbon emissions, is it possible to produce fossil fuels in an environmentally safe manner, what about the hysteria around pipeline spills, and other weighty questions.

According to Iggy Domagalski, CEO at Tundra Process Solutions, his company manufacturers’ and sells equipment that is safer, cleaner, and more sustainable, removing 15 million tonnes of greenhouse gases out of the atmosphere annually. His company hosts the Acceleration Centre for Entrepreneurs (AEC) program which

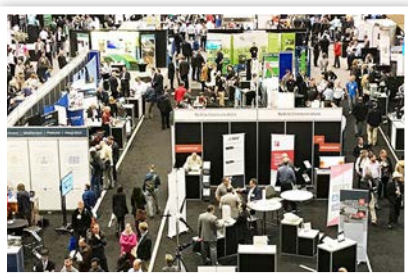

Photo courtesy Global Petroleum Show 2018.

helps successful entrepreneurs (usually engineers) to get their inventions and innovative equipment to market.

GPS 2018 also featured women in energy, citing the emergence of the #MeToo movement as igniting a greater societal consciousness about gender inequality and tangible changes. Unfortunately, research shows that approximately one-quarter to one-fifth of the overall energy industry is female and that number drops to one per cent sitting in the executive suite.

Katie Smith, executive director of Young Women in Energy (YWE), is aiming to change the face of energy and champion the interests of women working in this industry, especially the recent grads trying to fit in. She points toward a tripartite combination of 'government policy, workplace culture, and individual self-efficacy' as the three top barriers her colleagues face.

Another featured speaker was Peter Tertzakian, executive director of ARC Energy Research Institute. He's been concerned about the American's recent

transition from this country's most important customer to our leading competitor. This while Canadian provinces squabble with each other and the federal government about jurisdiction, emissions control, and other issues. He believes a "lack of human communication between silos of opinion" is a major cause of the current inter-provincial turbulence, with the Trans Mountain pipeline expansion at the heart of this debate. His focus at GPS was to "pull people together to discuss the real, root issues that extend beyond the narrow perspective the pipeline."

GPS 2018 featured an awards gala dinner. Winners were:

- **Leadership** – Minister Pedro Joaquin Coldwell, Mexico's Minister of Energy believes North America's energy trade can continued, even if NAFTA ends, but wants the free trade agreement successfully revamped.
- **Health and safety** – Blackline Safety, headquartered in Calgary, lives by the motto that every second counts, whether it's a gas leak, health event, safety incident, or security breach.

CAN STAR INDUSTRIAL
a division of CRC Wellhead Supply Co Ltd

**FOR YOUR
MACHINING
NEEDS!!**

We have a full range of tooling, supplies and accessories from an extensive variety of manufacturers. We can find what you need and get it to your shop when you need it.

We service Machine Shops in the Oil & Gas Industry. We stock and have quick access to a wide selection of items such as cutting tools, metalworking fluids, measuring & gaging tools, abrasives, marking equipment, tool holding, machines and accessories as well, hard-to-find items can be quickly sourced.

Ph: (780)-466-5876 Fax: (780)-466-1899

Email: sales@canstarindustrial.com 3755-74th Ave NW Edmonton, Ab. T6B 2T7

50,000 ATTENDEES FROM 115 COUNTRIES

Including:

- Algeria
- Argentina
- Australia
- Brazil
- Canada
- China

- Colombia
- Egypt
- India
- Iran
- Iraq
- Kuwait
- Mexico

- Nigeria
- Russia
- South Korea
- United Arab Emirates
- United Kingdom
- United States
- Venezuela

- **Indigenous engagement** – PIMEE Well Servicing is an Aboriginal leader in oil and gas well servicing and is owned by a group of six First Nations bands including: Beaver Lake, Frog Lake, Heart Lake, Kehewin Cree Saddle Lake, and Whitefish Lake Band #128.
- **Suzanne West environmental excellence** – Modern Resources, located in Calgary, was founded in 2012 with a vision to bring a modern approach to all aspects of the energy industry including health and safety, environmental stewardship, community involvement, employee fulfillment, and financial/operational performance.
- **Innovations in technologies: digital** – Mobilize, situated in Houston, organizes insights in the enterprise workflows to make life better for engineers in the oil and gas industry. It uses the big data analytics platform to augment human intelligence by providing all actionable insights instantly to avoid over-looking opportunities, underestimating risks, disputes, or delay decisions.
- **Innovations in technologies: process controls** – Amros Corporation, found in Sugar Land, TX, has developed a technology that uses standard open-hole log data to calculate production profiles that shows predicted production along the entire well. It often shows the best producing formations are distributed sporadically with different orientation and is often the difference between shale fields and classical conventional reservoirs.
- **Corporate social responsibility** – Tamarack Valley Energy, headquartered in Calgary, is an oil and gas company whose rate-of-return focused growth strategy targets the drilling and acquisition of repeatable and predictable long-life Cardium and Viking light oil plays in Alberta and Saskatchewan.
- **Innovations in technologies: equipment** – Saudi Aramco, located in Dhahran, signed a shareholder agreement with National Oilwell Varco, Inc. to form a joint venture partnership to establish an integrated world-

class onshore rig and equipment manufacturing/aftermarket facility in Ras Al-Khair, Saudi Arabia.

- **Emerging clean technologies** – CleanO2 Carbon Capture Technologies, situated in Calgary, reduces energy usage of commercial boilers that use natural gas and captures CO2 then converts it to sodium carbonate, a much sought-after alkali chemical used to manufacture glass, detergents, and chemicals.

The 5th GPS is scheduled for June 11-13, 2019 at the Stampede Park in Calgary. ⊕

Lloydminster Heavy Oil Show Sept. 12-13, 2018 Celebrates Its People, Technology, & Roots

By: Heather Douglas

In 1984, the Government of Canada was led by three prime ministers - Pierre Elliott Trudeau, John Turner, and Brian Mulroney - while Alberta was run by Premier Peter Lougheed. The Edmonton Oilers won their first Stanley Cup by defeating the New York Islanders and the Winnipeg Blue Bombers earned their eighth Grey Cup by over-running the Hamilton Tiger-Cats. The price of crude averaged \$28.75 internationally while Canadian heavies fetched about \$9.50/bbl (US) less.

The Lloydminster Heavy Oil Show (HOS) was launched in 1984 at a time when optimism was again peaking above the clouds of the hated National Energy Program (NEP). Prime Minister Trudeau was out and Mulroney swept into Parliament that fall with the largest landslide majority government in Canadian history. He won the west by promising to eliminate the NEP and free natural resource production from Ottawa's talons, including the heavy oil reservoirs surrounding Lloydminster.

Celebrates People & Technology

The 2018 version of the Lloydminster HOS - proudly applauded as the world's premier showcase for heavy oil knowledge and technology - pays tribute to the specialized methods, cold and thermal production, used to extract the crude. It will also acknowledge that special breed of worker, known as the heavy oilman and woman who are committed to

coaxing up the viscous production. The Lloydminster oilpatch is unique, as are the men and women who have managed its operations for the past four decades.

The Lloydminster HOS show is always held at the border city's agricultural exhibition grounds. The organizing committee expects about 6,000 people to attend the event. That committee, composed of 14 volunteers, whose day jobs are with operators, service providers, and supply companies - are pleased to report the Hon. Jason Kenny, leader of the United Conservative Party (UCP) will be the keynote speaker on Wednesday, Sept. 12th.

According to Roger Deeks, volunteer coordinator (sales rep with Western Star and First Trucking Centre), the Society of Petroleum Engineers (SPE) organizes the technical presentations while the Oilfield Technical Society (OTS) sponsors the event. "We have a renewed optimism the show will be a success," says Deeks. "Of course, that's fueled by the rise in crude price, the prospect of selling oil overseas through the Trans Mountain pipeline expansion, and the dedication of the oilfield workers in this area. We are all specialists in Canada's blackest gold."

Celebrates Roots

It is never easy to attract capital to drill a 20 bbl/d well. Precious investment dollars always seemed to chase the drilling of high-production light oilwells. Lloydminster petroleum is thick, black, and has an API gravity as low as six degrees. Most

barrels are full of sand and water, making it challenging to pump and harder to sell. The major by-products are asphalt and bunker oil, and while approximately 29,000 bbl/d is refined at the Husky asphalt refinery, most is exported to the United States for refining.

Two events occurred in the early 1960's which were to permanently alter the shape of the Lloydminster oilpatch and mould it into the community it is today. The first came in 1961 when the Saskatchewan government introduced the drilling of "stratigraphic test" holes on the provincial road allowances. These enabled the oil companies, particularly Husky Oil, to determine the size of the reservoirs at a very low cost since the holes could be drilled, logged, cemented, and abandoned for around \$3,500. At the same time Husky was producing at less than half capacity from its 180 wells.

Encouraged by the size of the reservoirs, Husky launched construction of its "yo yo" pipeline in 1963 and connected to the main Interprovincial Pipeline (IPPL) at Hardisty. By mixing the heavy oil with condensates for transportation to the main line, then returning the condensates for the next batch, this "yo yo" pipeline became the area's first reliable market.

Along with the pipeline Husky announced the Husky Lloydminster Project in 1963, the object being to raise the company's production to 12,000 bbl/d while simultaneously reducing lifting, gathering and transmission costs with an ambitious battery, flow line and tie in system construction

program. In 1963, the fields around Lloydminster were producing 3,400 bbl/d. By 1970 it averaged 21,500 bbl/d.

For the moment, the future of the Lloydminster oil industry is sound. North America still needs asphalt. ⊕

PIMEE Well Servicing Wins GPS Award for Indigenous Engagement

“When people are financially invested, they want a return. When they are emotionally invested, they want to contribute. That’s what a high-performing company strives to create. A great place for great people to do great work.” Simon Sinek (1973 -), British-American author and Marilyn Carlson.

PIMEE Well Servicing LP was honoured with the Global Petroleum Show’s Indigenous engagement award. That’s a well-deserved tribute to the 34-year old company headquartered at Kehewin, Alberta (north-northeast of Edmonton, located about halfway between Elk Point and Bonnyville). The company has a reputation for delivering high-quality services at competitive prices and has survived the recent price volatility, emerging as a stronger organization.

PIMEE is 99 per cent owned and operated by Aboriginals of six First Nations Bands including: Beaver Lake, Frog Lake, Heart lake, Kehewin Cree, Saddle Lake, and Whitefish (Goodfish) Lake Band #128). The company’s board of directors are the chiefs of each First Nation and they all have an equal voice in how the business is run. The firm operates with two mandates – provide excellent service to its clients and create opportunities for the surrounding Indigenous communities.

This success has enabled the company to nurture an impressive roster of Indigenous talent among its Aboriginal communities. Even those not directly employed by the company have been touched by its commitment to excellence and hard work, namely the young people in the area who see the opportunities that the oil and gas industry can offer.

PIMEE prides itself in asking the right questions of its clients and this enables it to establish clear goals to ensure the well is serviced efficiently. They have always avoided the ‘one size fits all’ approach, knowing that no two applications are alike. The company also tracks changing industry issues and regulations, especially those relating to the environment, including those to do with safe and clear drinking water, resource conservation, emergency planning, community engagement, toxic substances, and clean air.

In keeping with its First Nations roots, conservation is important to the PIMEE team. The company stresses reverence for the environment in its guiding principles, one of which is to treat the Earth and its inhabitants with the utmost respect, the organization always attempts to balance environmental conservation and responsible development

of the province's oil and gas resources.

Because of their traditions and commitment to the land, Aboriginal businesses are deeply rooted in community. They care deeply about building long-term relationships with their business partners. Engagement with First Nations Communities needs to be done in person, with respect and understanding of culture, hardship, and past deceptions. Personal relationships need to be developed and maintained over long periods of time. Partnerships with First Nations must be seen to provide benefit to the community, provide employment, education, and opportunity for a true working relationship.

Company's Roots Lie in Servicing Oilsands

When the bands met to discuss launching the company, they reached a consensus that a service company would be more sustainable plus provide a more stable work environment in the Cold Lake area, so employees could go home at night. Clayton Byrt, CEO, is quoted as saying, "Our employees have a greater sense of ownership and pride. They see a future with an employer who has their well-being in mind. We focus on the development of our employees."

PIMEE has grown and evolved since the company purchased its first rig in

1984, with the assistance of Imperial Oil. Another followed in 1987. By 1990, the firm was ready to diversify its service offerings. Today it has several business units: the service rig division, general oilfield and downhole maintenance, rod rig, fluid shot, and TMX divisions. Today it operates 11 service rigs, two rod rigs, a trailer-mounted x-celator, and its own transportation equipment. The company has also formed several joint ventures with major producers including Imperial Oil, Husky, Canadian Natural Resources, and Cenovus Energy.

Building partnerships with Indigenous communities will only become more important for our industry as more and more bands embrace the model created by PIMEE and other First Nations communities wanting to maximize the benefit of the resources in their areas. Young Aboriginals in Alberta have excelled in the trades for generations - in forestry, pipeline maintenance, and oil and gas extraction.

When people are financially invested, they want a return. When they are emotionally invested, they want to contribute. That's what a high-performing company like PIMEE strives to create. A great place for great people to do great work. ⊕

Bravo Target Safety Partners with Blackline Safety to Increase Worker Safety & Competitiveness

New wearable technology connects personnel with a live safety team while increasing overall productivity.

Bravo Target Safety, a leading provider of industrial and oilfield emergency response and safety services, announced a partnership with Blackline Safety to leverage the safety and connectivity of Blackline's G7c emergency response management, cloud-hosted safety portal, and business analytics software. Bravo is the first company in the world to use G7c for industrial turnaround projects.

From its seven locations in Alberta -- Bonnyville, Calgary, Edmonton, Fort McMurray, Grande Prairie and Red Deer -- Bravo serves clients in the energy, chemical, mining, and construction industries across Western Canada. Principal services include: turnarounds/shutdowns, emergency response, hydrocarbon firefighting, and well control. The team distinguishes itself by providing unrivaled service, support, and response times.

Blackline Safety's G7c is a wearable safety device that uses 3G cellular networks to wirelessly connect front-line workers, often working alone, to live monitoring centres. Automatically detecting gases (including hydrogen

sulfide, oxygen, carbon monoxide, and explosive gases), injuries, and other hazards, G7c accounts for employees' wellbeing and whereabouts in real-time. All safety incidents are communicated to 24/7 live monitoring personnel who can mobilize responders to the employee's exact location or trigger an evacuation. Two-way voice calling, constant connectivity, and real-time alerting provide exceptional situational awareness to efficiently manage emergency responses.

"We are committed to keeping our teams safe when working on maintenance projects," says Kevin O'Brien, Bravo's CEO. "When we set out to connect our personnel using safety technology, we quickly identified G7c as the most innovative solution of its kind on the market."

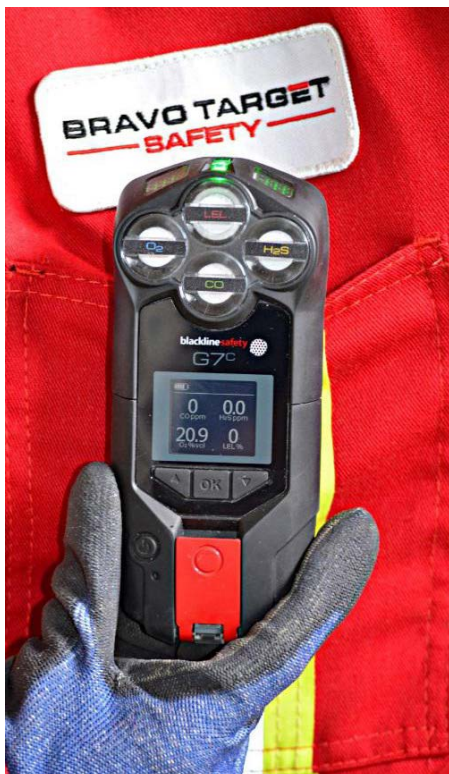

In a first phase, Bravo has deployed 250 G7c devices to protect personnel. Previously, gas detection was limited to simple monitoring devices with basic capabilities. With G7c, workers will benefit from real-time safety features including two-way communications, gas alarms, fall detection, no-motion detection, scheduled check-ins, GPS location technology, and a manual SOS latch. In addition to

these life-saving features, G7c technology helps Bravo work more efficiently.

“Our team at Blackline Safety is excited to support Bravo Target Safety and their leadership in the plant maintenance sector,” adds Sean Stinson, vice president, sales and product management at Blackline Safety. “Our new, highly competitive energy economy requires businesses to find innovative ways to increase efficiencies. While our G7c device has redefined what’s possible on the wireless gas detection and connected worker fronts, for the first time, it also connects customers’ safety and operations goals.”

Beyond the potential to save lives, G7c generates a wealth of data for analysis. For example, it reports the location of low level gas readings to the Blackline portal, which traditional monitors failed to capture. This information enables decision-makers to quickly see where leaks may be occurring, highlighting the need for remediation. With this intelligence, our clients may pre-empt hazards and avoid unnecessary expenditures — or worse — inadvertent employee exposures.

“We’re working with Blackline because we need the best wearable safety technology to protect our people while generating powerful business intelligence for our customers,” adds O’Brien. ⊕

ROUGHNECK MAGAZINE IS ALWAYS ON THE LOOK-OUT FOR BOOKS TO TAKE TO THE BEACH – IN OTHER WORDS, GREAT SUMMER READING.

Wolverine Hills Espionage Scout

By L. Gordon Kesler

Published in 2017

Wolverine Hills Espionage Scout is a story of intrigue and action focused on oilfield scouting – also known as spying – and is an integral part of giving an exploration and producing (E&P) company a competitive edge when it goes to bid for petroleum and natural gas leases.

The backdrop is an ongoing conflict in the Middle East when an international terrorist group, headed by Syria's president, has declared war on its neighbours, who have consistently supported the United States sanctions against his regime. Assad's people have blown up oil facilities and have blocked the shipping lanes, effectively stopping the flow of oil to North America.

The novel is woven around an upcoming land sale in an area that was previously considered out-of-bounds by the provincial government, due to environmental concerns. Due to the tensions in the Middle East, the Department of Energy has decided to include this acreage in upcoming sales. Naturally, the competition is fierce to acquire those properties and, in some cases, life-threatening.

One area, known as Wolverine Hills, holds the prospects for a huge oil discovery and only two companies can bid on the mineral rights. Drilling rigs

are moved into evaluate the prospective formations. Where exploratory wells are drilled, scouts are usually lurking. Their job is to gain as much information as possible before submitting a bid to purchase any adjacent acreage.

Max, an Aboriginal from northern Alberta, is a field scout with seven years-experience, working for a junior upstart producer. In the field, Max encounters opposition scouts as well as counter scouts. Tom Hughes is the main protagonist in the field. He's a 35-year who considers himself a super-scout. Naturally, he has a huge ego. He is prepared to do whatever it takes to stop Max from getting the information from his client's well. That includes kidnapping, using explosives and other surprise are all part of his *modus operandi*. Hughes has a partner named Bill, although universally called "Polecat." He's been spying for three decades but has lost his edge, due to his alcoholism.

The conflict occurs in the field and in the high-rise offices of many oil companies' headquarters in Calgary. The two oil companies drilling into the land sale have no love for each other. Neither do the scouts in the field. It makes for a ruthless situation where lives and careers are in peril.

In the end, it's a story of spies, counter spies, and traitors.

The Patch: The People, Pipelines, and Politics of the Oil Sands

By Chris Turner

Published by Simon & Schuster

Canada (2017)

"There's no common ground. And that is how both sides lose."

The rise of the oil sands was an industrial triumph and the culmination of a century of tireless innovation. Fort McMurray was the industry's boomtown and the centre of a modern gold rush as the oil sands reshaped the global energy, political, and economic landscapes.

But in 2008, the story changed. As financial markets collapsed and the cold, hard, scientific reality of the Patch's environmental impact became clear, the oil sands turned into a political pariah. The streets of Fort McMurray became the front line of a high-stakes collision between two conflicting world views – one of industrial triumph and the other of environmental stewardship in the age of climate change.

The Patch is the definitive story of this global conflict, told through the eyes of those who live in it day-to-day – from the shift workers, entrepreneurs, and politicians who make a living mining the oil sands material riches to the scientists, activists, and Indigenous peoples who seek to curb the region's unrestrained growth.

With remarkable clarity and urgency, *The Patch* shows how deeply the oil sands business affects all our lives. From Fort McMurray to factories and refineries in the Midwest, from Washington to London, from Saudi Arabia to China, the whole world is connected to this colossal enterprise. How have we got to this point? What will come next? And, most importantly, if we are to

both fuel the world and to save it, what do we do about the Patch?

Politics, with whatever ugly baggage comes attached to it, is the necessary vehicle for collective action in democratic societies. Politics is how Karl Clark funded research to develop hot water separation for bitumen; the way Howard Pew was convinced to invest millions of dollars of Sun Oil's money in a bitumen mine; the way Syncrude found funding after its financing nearly collapsed; how a tax and royalty regime was installed to trigger the long boom. And now politics must find its way to a middle ground, a plateau and long fade in the Patch as the technology and economics and political will come together to build that low-carbon world. And it must do so, alas, with a battle-ground as its starting point. ⊕

Russia Considers \$50.0 B (US) Investment in Iranian Oil & Gas

Oil Price is reporting that Russian energy companies could spend as much as \$50 billion (US) on oil and gas exploration in Iran, a presidential aide told media. Yuri Ushakov said companies including Rosneft, Gazprom, Gazprom Neft, Lukoil, Zarubezhneft, and Tatneft were “systemically working on development of fields in Iran.”

During a visit of Russia’s President Vladimir Putin in Iran last November, the two countries signed six preliminary agreements on oil and gas projects that would see up to \$30 billion (US) in Russian investments flow into Iran’s energy industry. Russia is a natural partner for Iran in energy, unlike Western oil supermajors that are wary of investing in the

country over fears that Washington may reimpose economic sanctions that could force them to abandon any deals struck with the country.

Russia is planning to expand economic cooperation with the Islamic Republic of Iran in the oil and gas industry to ensure sustainable economic development, Russian President Vladimir Putin said after meeting his Iranian counterpart. It sees “a great potential for enhanced oil and gas industry cooperation,” Putin said at a joint news conference which followed the meeting of the two leaders. He added that “leading Russian companies have reached a number of important agreements concerning the development of major hydrocarbon deposits in Iran.” ⊕

DENMARK PENSION FUND EXPELS BIG OIL & GAS

Thirty-five of the world's biggest oil and gas firms were given their walking papers mid-April as the Danish pension, PKA, exerted its influence, reports *Aberdeen Journal*. The Danish pension fund excluded 35 oil and gas firms over failure to meet Paris climate agreement targets.

Gazprom, Rosneft, Marathon Oil, Apache and Sinopec were all dismissed as PKA doubled down on its threat to actively shift from oil and gas to renewable energy. PKA had previously dismissed 70 coal firms as it holds big firm's feet to the fire over climate targets, warning that the automotive industry is next.

Denmark is under pressure to rule if a new Russian pipeline supplying gas to Germany can be built near its Baltic coast, a decision that puts it in the line of fire from friend and foe alike. Denmark does not want to act alone in resolving one of the biggest foreign policy quandaries that the small European Union nation has faced since the Cold War. But its search for a united EU stance on the proposed pipeline is deadlocked by divisions among member states over whether to do more business with Moscow despite its military incursions in Ukraine and Syria and accusations it used a nerve agent in an attempted assassination on British soil. ⊕

Jokes- July/August 2018

Free Beer on Tap — A woman said she thought she was in heaven when she turned on the kitchen tap to find a plentiful supply of beer. Haldis Gundersen was planning to do the washing up when she made the unusual discovery at her apartment in Kristiansund, West Norway. Meanwhile two flights below, workers in a bar faced the more disappointing realization, water was flowing from their beer taps and not ale. A worker had connected a beer barrel to the apartment water pipe by mistake.

"I turned on the tap to clean some knives and forks, and beer came out," Ms. Gundersen told Reuters. "We thought we were in heaven with free beer on tap."

Mother Knows Best -- A beer before bed means a better night's sleep for the whole family.

Dead Duck — A woman brought a very limp duck into a veterinary surgeon. As she laid her pet on the table, the vet pulled out his stethoscope and listened to the bird's chest. After a moment or two, the vet shook his head sadly and said, "I'm so sorry, your Duck, Cuddles, has passed away."

The distressed owner wailed, "Are you sure?"

"Yes, I am sure the duck is dead," he replied.

"How can you be so sure?" she probed. "I mean, you haven't done any testing on him or anything! He might just be in a coma or something."

The vet rolled his eyes, turned around

and left the room, and returned a few moments later with a black Labrador Retriever. As the duck's owner looked on in amazement, the dog stood on his hind legs, put his front paws on the examination table and sniffed the duck from top to bottom. He then looked at the vet with sad eyes and shook his head. The vet patted the dog and took it out, and returned a few moments later with a cat.

The cat jumped up on the table and sniffed delicately at the bird from head to foot. The cat sat back on its haunches, shook its head, meowed softly and strolled out of the room. The vet looked at the woman and said, "I'm sorry, but as I said, this is most definitely, 100 per cent certifiably, a dead duck."

Then the vet turned to his computer terminal, hit a few keys and produced a bill, which he handed to the woman. The duck's owner, still in shock, took the bill. "\$150!" she cried, "\$150 just to tell me my duck is dead!!!"

The vet shrugged. "I'm sorry. If you'd taken my word for it, the bill would have been \$20, but with the Lab Report and the Cat Scan, it's now \$150."

Another Example of Imprinting —

Duck Road Calming -- Ann Martin, 63, of Portesham, Dorset taught ducks to follow her from a nearby pond, and then to cross the road. Ann's idea is to slow speeding drivers, especially during the rush hour. Ann Martin, who is a local postmistress, said that drivers heading into Weymouth "use the village as a rat-run." ⊕
